PROFESSIONAL SUMMARY

Machine Learning Engineer with 3 years of experience specializing in deep learning architectures (Transformers, CNNs, RNNs) and scaling model training and inference pipelines in cloud environments.

TECHNICAL SKILLS

Languages: Python, SQL, C++
Frameworks: PyTorch, TensorFlow, HuggingFace, scikit-learn, NumPy, pandas
MLOps & Cloud: Docker, AWS (SageMaker, EC2, S3), MLflow, Weights & Biases, Git
Techniques: Distributed training, mixed-precision (FP16), REST API model serving

WORK EXPERIENCE

Senior ML Engineer — Datamind AI (Jul 2023 – Present)
• Architected Transformer-based recommendation algorithms in PyTorch, reducing inference latency by 35% using mixed-precision acceleration.
• Deployed multi-GPU distributed training workflows on AWS SageMaker with MLflow experiment tracking.

Machine Learning Engineer — TensorEdge Labs (2021 – 2023)
• Designed deep learning forecast models processing 10M daily transactions with high precision.
• Built robust containerized REST APIs using Docker and FastAPI for model inference.

EDUCATION

B.Tech in Computer Science and Engineering, IIT Kharagpur (2017 – 2021)

PROJECTS

• **Deep Vision Defect Detection:** CNN-based defect identification pipeline achieving 96% accuracy on industrial edge cameras.

• **Real-time Feature Store:** End-to-end streaming ML pipeline integrated with Kafka and Redis for live predictions.
