SUMMARY

Machine learning engineer with 2 years of experience building and deploying deep learning models for recommendation and forecasting systems. Proficient in PyTorch, Python, and cloud deployment. Strong foundation in neural network fundamentals from graduate coursework and applied research.

SKILLS

Languages: Python, SQL, C++
ML/DL: PyTorch, TensorFlow, scikit-learn, pandas, NumPy
Tools: Docker, Git, MLflow, Weights & Biases, AWS (EC2, S3, SageMaker)
Concepts: CNNs, RNNs, Transformers, distributed training, mixed precision training

EXPERIENCE

Machine Learning Engineer — Loop Analytics

Bengaluru, India | Jul 2024 – Present

- Built a Transformer-based recommendation model in PyTorch, improving click-through rate by 12% over the baseline collaborative filter
- Deployed models to production as REST APIs using Docker and AWS SageMaker, serving ~2M requests/day
- Built data pipelines for training and evaluation using pandas and SQL, cutting data prep time by 30%
- Tracked experiments with MLflow and set up reproducible training pipelines for the team

Data Science Intern — Kavach Fintech

Remote | Jan 2024 – Jun 2024

- Developed a fraud-detection model using gradient boosting and a CNN-based feature extractor on transaction data
- Wrote unit-tested Python modules for the data ingestion pipeline, integrated with Git-based CI workflow

EDUCATION

B.Tech, Computer Science — Indian Institute of Information Technology, Pune

Graduated 2024 | GPA: 8.7/10

Relevant coursework: Deep Learning, Neural Networks, Distributed Systems, Statistics

PROJECTS

- **Image Captioning with Attention** — Built a CNN-RNN model with attention in PyTorch on MS-COCO; wrote a short report on results
- **Sales Forecasting Pipeline** — End-to-end forecasting pipeline (data cleaning, feature engineering, LSTM model) deployed via Docker
